TRIAX Press Release

18 May 2018

TRIAX launches enterprise-grade networking + WiFi over coax at ANGA COM

Ethernet over Coax + WiFi is the complete network solution businesses and their customers can rely on, saving costs and time with its ease of installation.

Hornslyd, Denmark, 18 May 2018 – TRIAX today launched Ethernet over Coax + WiFi, the enterprise-grade LAN & WiFi solution that connects coax cables to the future.

With the release, the company brings its reputation as a reliable and innovative partner into the ever more critical market segment of delivering safe, secure WiFi and networking.

The solution delivers an enterprise-grade 1 Gbps network over coax, and is ideal for hotels, housing associations and small businesses whose infrastructure is built up on coaxial cabling.

“TRIAX Ethernet over Coax + WiFi unleashes the full potential of coax cables,” says Peter Lyhne Uhrenholt, TRIAX CEO. “We’re offering an incredible solution that offers significant savings on network installation projects. It delivers the network and reliable WiFi services businesses need, without the considerable time and money spent on installing new cables or replacing legacy infrastructure.”

The TRIAX solution marks an unprecedented step forward in maximising the networking capability of coax. “We’re proud to be leading the field in offering a professional managed solution combining G.hn technology and WiFi,” says Torben Flodgaard Kristensen, Group Product Manager at TRIAX. “TV signals remain unaffected on the network, so you won’t need to lose installation time having to retune every TV in the building. We’re also offering the freedom to create any number of virtual networks, ensuring company and guest data can be kept entirely separate.”

While available separately, TRIAX EoC + WiFi truly comes into its own as an integral element of TRIAX Solutions. Combined with the TRIAX In Touch interactive communication platform, you can manage guest access to your WiFi network, and TRIAX TV Headends offer high-end IPTV and other signal processing to be sent through the coax network, all managed in a tried and trusted, common TRIAX interface.

All this alongside TRIAX’s Partner Network and in-depth Training Academy ensures customers are supported every step of the way.

TRIAX Ethernet over Coax + WiFi is on sale from today, and will be on show as an integral part of our products & solutions stand at ANGA COM.

Find us in Hall 8, stand R20 at ANGA COM, Cologne, Germany, 12-14 June 2018.

Torben Flodgaard Kristensen, TRIAX Group Product Manager, presents *WiFi Coverage using Existing Coax Network Infrastructures* at the *WiFi – Use Cases, Coverage and User Experience* ANGA COM conference panel, Thurs 14 June 2018 13.00-14.15, Room 2.
